

Patent claims

1. An access protection system for a computer,
characterized in that
5 access is enabled by connecting a registered
transportable storage medium to the computer.
2. The access protection system as claimed in
claim 1,
10 characterized in that
the transportable storage medium has an individual
identifier, such as the serial number, and this
individual identifier is stored in the computer, and
the computer enables the user to access the computer as
15 a whole or individual applications only after
recognizing the individual identifier.
3. The access protection system as claimed in either
of claims 1 and 2,
20 characterized in that
the transportable storage medium is a Flash memory or a
storage medium which is technically similar.
4. The access protection system as claimed in one of
25 claims 1 to 3,
characterized in that
the transportable storage medium can be connected to
the computer, monitor, keyboard or other peripheral
devices associated with the computer by means of a USB
30 (Universal Serial Bus) interface.
5. A transportable storage medium with an individual
identifier,
characterized in that
35 the transportable storage medium is used as an
individual access key for a computer.
